All Rights Reserved

No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1987 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 33

Number 1, January 1987

Clemenceau Acquaye, Elijah C. Walker, and Alan N. Schechter. The Development of a Filtration System for Evaluating Flow Characteristics of Erythrocytes 1

L. A. Paul and W. H. Oldendorf. Diet-Induced Changes in Rabbit Serum Potassium Do Not Alter Size or Number of Brain Capillary Endothelial Cell Mitochondria 15

Harvey N. Mayrovitz, Shy-Jer Kang, Berta Herscovici, and Ronald N. Sampsell. Leukocyte Adherence Initiation in Skeletal Muscle Capillaries and Venules 22

Gary T. Kinasewitz, Lynn J. Groome, D. Keith Payne, and John N. Diana. Concentration Dependence of Protein Permeability across the Canine Visceral Pleura 35

W. Wayne Lautt, Clive V. Greenway, and Dallas J. Legare. Effect of Hepatic Nerves, Norepinephrine, Angiotensin, and Elevated Central Venous Pressure on Postsinusoidal Resistance Sites and Intrahepatic Pressures in Cats 50

Joji Ando, Hideshi Nomura, and Akira Kamiya. The Effect of Fluid Shear Stress on the Migration and Proliferation of Cultured Endothelial Cells 62

Dick W. Slaaf, Geert Jan Tangelder, Harry C. Teirlinck, and Robert S. Reneman. Arteriolar Vasomotion and Arterial Pressure Reduction in Rabbit Tenuissimus Muscle 71

Gerald A. Meininger, Karen L. Fehr, and Miriam B. Yates. Anatomic and Hemodynamic Characteristics of the Blood Vessels Feeding the Cremaster Skeletal Muscle in the Rat 81

Odile Mathieu-Costello. Capillary Tortuosity and Degree of Contraction or Extension of Skeletal Muscles 98

I. C. MacDonald, D. M. Ragan, E. E. Schmidt, and A. C. Groom. Kinetics of Red Blood Cell Passage through Interendothelial Slits into Venous Sinuses in Rat Spleen, Analyzed by *in Vivo* Microscopy 118

Glen A. Laine, Steven J. Allen, Jeffrey Katz, Joseph C. Gabel, and Robert E. Drake. Outflow Pressure Reduces Lymph Flow Rate from Various Tissues 135

Number 2, March 1987

G. Diéguez, A. L. García, M. V. Conde, B. Gómez, L. Santamaría, and S. Lluch. *In Vitro* Studies of the Carotid Rete Mirabile of Artiodactyla 143

Lynn J. Groome and Gary T. Kinasewitz. Spatial Heterogeneity and Microvascular Fluid Exchange: A Simple Macroscopic Equation 155

J. M. Dawson, K. R. Tyler, and O. Hudlicka. A Comparison of the Microcirculation in Rat Fast Glycolytic and Slow Oxidative Muscles at Rest and during Contractions 167

N. S. Faithfull, C. E. King, and S. M. Cain. Peripheral Vascular Responses to Fluorocarbon Administration 183

Noboru Sato, Yoshio Sawasaki, Akira Senoo, Yusuke Fuse, Yukiko Hirano, and Tamotsu Goto. Development of Capillary Networks from Rat Microvascular Fragments *in Vitro*: The Role of Myofibroblastic Cells 194

Arno W. Tilles and Eugene C. Eckstein. The Near-Wall Excess of Platelet-Sized Particles in Blood Flow: Its Dependence on Hematocrit and Wall Shear Rate 211

Gian C. Winkler and Norman F. Cheville. Postnatal Colonization of Porcine Lung Capillaries by Intravascular Macrophages: An Ultrastructural, Morphometric Analysis 224

J. R. Levick and L. H. Smaje. An Analysis of the Permeability of a Fenestra 233

D. Scott McLeod, Gerard A. Lutty, Stephen D. Wajer, and Robert W. Flower. Visualization of a Developing Vasculature 257

P. A. Stewart, M. Magliocco, K. Hayakawa, C. L. Farrell, R. F. Del Maestro, J. Girvin, J. C. E. Kaufmann, H. V. Vinters, and J. Gilbert. A Quantitative Analysis of Blood–Brain Barrier Ultrastructure in the Aging Human 270

Giovanni Brotzu, Susanna Falchi, Roberto Montisci, and Palmina Petruzzo. β-Blockers: A New Therapeutic Approach to Raynaud's Disease 283

Number 3, May 1987

Aubrey E. Taylor. The Microcirculatory Society Eugene M. Landis Award Lecture. Capillaries and Cowboys 289

Paul Davies, Barry T. Smith, Francis B. Maddalo, David Langleben, Dave Tobias, Keigi Fujiwara, and Lynne Reid. Characteristics of Lung Pericytes in Culture Including Their Growth Inhibition by Endothelial Substrate 300

Dick W. Slaaf, Robert S. Reneman, and Curt A. Wiederhielm. Pressure Regulation in Muscle of Unanesthetized Bats 315

Richard C. Schaeffer, Jr., Marion I. Barnhart, and Richard W. Carlson. Pulmonary Fibrin Deposition and Increased Microvascular Permeability to Protein following Fibrin Microembolism in Dogs: A Structure–Function Relationship 327

Per Borgström and Staffan Gestrelius. Integrated Myogenic and Metabolic Control of Vascular Tone in Skeletal Muscle during Autoregulation of Blood Flow 353

D. M. Audet and W. L. Olbricht. The Motion of Model Cells at Capillary Bifurcations 377

Mauricio P. Borić, Juan S. Roblero, and Walter N. Durán. Quantitation of Bradykinin-Induced Microvascular Leakage of FITC–Dextran in Rat Cremaster Muscle 397

Brief Communications

Curt A. Wiederhielm and Dick W. Slaaf. A New Skeletal Muscle Preparation for the Study of Microvascular Function in Intact Unanesthetized Animals 413

James W. Schmidley. Ultrastructural Studies of Basement Membranes of Microvessels Isolated from Rat Brain: Lack of Staining with Ruthenium Red 417

Technical Reports

Felix Mahler, Hugo Saner, Christian Boss, and Mark Annaheim. Local Cold Exposure Test for Capillaroscopic Examination of Patients with Raynaud's Syndrome 422

C. G. Ellis, K. Tyml, and W. Burgess. Quantification of Red Cell Movement in Microvessels: A New Application of Interactive Computer Graphics 428

B. J. Barber, Harold Eick, Tim Stiemke, and David Zawieja. Construction of an Optical Bench Microscope for Intravital Studies 433

Announcement 437

Author Index for Volume 33 438

The Subject Index for Volume 33 will appear in the November 1987 issue as part of a cumulative index for the year 1987.

Information for Contributors

Microvascular Research (MVR) is an international journal dedicated to the dissemination of fundamental information related to the microvascular field.

Submission of Manuscripts. One original and two complete carbon copies should be sent via first-class mail, in flat form, to **Microvascular Research Editorial Office, Dr. David Shepro, 2 Cummington St., Boston University, Boston, Massachusetts 02215.** MVR will not be responsible for manuscripts lost in the mails.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Microvascular Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript Style. Papers should be typewritten, double-spaced on one side of the paper, with wide margins. The manuscript should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, References, and Acknowledgments. The abstract, which will precede each article, should be 225 words or less and should be typed on a separate sheet. In addition the manuscript should include, on separate pages, (1) the complete title with names of authors and affiliations (including ZIP CODE), (2) running title, consisting of no more than 40 characters including spaces, (3) key words that are suitable as **Index Descriptors,** and (4) the address to which proofs are to be mailed.

Tables. Tables are to be typed on separate sheets and numbered with Arabic numerals. Each table should contain an explanatory title that would make reference to the text unnecessary.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

Illustrations, drawn with a lettering set, should be in finished form ready for the printer. Lettering on the original drawing should be large enough (minimum, 4 mm) to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than 8.5 × 11 inches, with coordinates properly labeled; grid lines that are to show in the photoreproduction should be inked in black.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. For best reproduction of halftones, provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. The dimensions of the printed page are 5 × 8 in. (127 × 203 mm). It is recommended that micrographs be submitted as near as possible to this size so that large reductions will not be necessary.

Illustrations in color can be accepted only if the authors defray the cost.

Footnotes. These should be designated in the *text* by superscript *numbers* and typed on a separate sheet; in the tables by superscript *letters* and typed at the bottom of the table.

Abbreviations. In general these should follow the usage employed by Chemical Abstracts. The *Style Manual,* 1986, of the American Chemical Society is also an acceptable guide.

References. Citations in the text consist of the author's name, and the year of publication in parentheses. The references should be listed alphabetically and should conform to the following style:

GRAYSON, J., AND LEVESON, M. (1985). Functional and morphological changes in the microcirculation of the dog following acute coronary artery ligation. *Microvasc. Res.* **29,** 161–175.

ALLEN, J. C., AND BUKOSKI, R. D. (1982). Current status of vascular smooth muscle subcellular calcium regulation. *In* "Vascular Smooth Muscle: Metabolic, Ionic, and Contractile Mechanisms" (M. F. Crass III and C. D. Barnes, eds.), pp. 99–134. Academic Press, New York.

Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index*, 1985. Unpublished observations and personal communications should be cited in the *text* as such.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints of each article (without covers) will be supplied free of charge. Additional reprints may be ordered. A reprint form will accompany the proofs.

Brief Communications. Preliminary reports will be reviewed for prompt publication; however, the comments must be restricted to no more than five typewritten pages, including references, tables, and illustrations. No abstract should be included.

To facilitate the publication of manuscripts, especially those papers based upon a new, theoretical concept, the Editors invite each contributor to submit the names of at least three scientists who could review the submitted manuscript.
